

Publisher Report Guide

Word Count is the number of words processed in the content measurement analysis.

Lexile Text Measure represents the numerical text complexity measure. Data from this field should not be published. Instead, published measures should come from the *Lexile Text Measure Display* field.

Lexile Text Measure Display contains the data that should be used when publishing Lexile text measures. This field includes the L metric and adheres to the MetaMetrics® Branding Guidelines.

Lexile Code is reported when applicable. It is a two-letter designation to provide more information about the type of book, its developmental appropriateness, and/or intended use. If a Lexile code is reported, it should precede the number and "L" (for example, AD500L). If the Lexile code is NP, there is no Lexile text measure and you should display NP.*

* The Lexile code NP (Non-Prose) indicates that no Lexile text measure is available because the text consists primarily of non-prose content.
