Designed for Educators, by Educators

The *Lexile® & Quantile® Educator Academy* offers courses for reading and math. Each course includes:

- ➔ Four interactive, self-paced learning modules.
- ➔ Best practices to leverage time-saving tools and resources on the *Lexile® & Quantile® Hub*.
- ➔ Opportunities to use research-based strategies with your students.
- ➔ Access to a growing community of certified Lexile and Quantile educators from across the nation.

Course Snapshot

Courses can be purchased separately.

Certification of Completion

- CEUs (in applicable states)
- Microcredential badges

Time & Location

- 10 hours, self-paced
- Online, asynchronous

Why choose professional development that is based on Lexile and Quantile measures?

Lexile and Quantile measures provide accurate measurement needed to support a student's reading and math development and advance equitable outcomes. The measures are widely adopted, research-based and embedded in state and federal policy. Using universal measures helps you understand student performance levels and materials that will support individualized progress.

Align Your Teaching to Science of Reading

Once you understand the brain research behind how children learn to read, the Educator Academy's **Lexile® Certification Course** will help you put this knowledge into practice. With our Foundational Reading module, you will:

- ➔ Understand the research behind the science of reading.
- ➔ Learn about how you can use our **Lexile® Find a Decodable Book** and **Lexile® Decodable Passages** to support phonics instruction.

The Lexile Certification Course extends and touches on all five pillars of literacy.

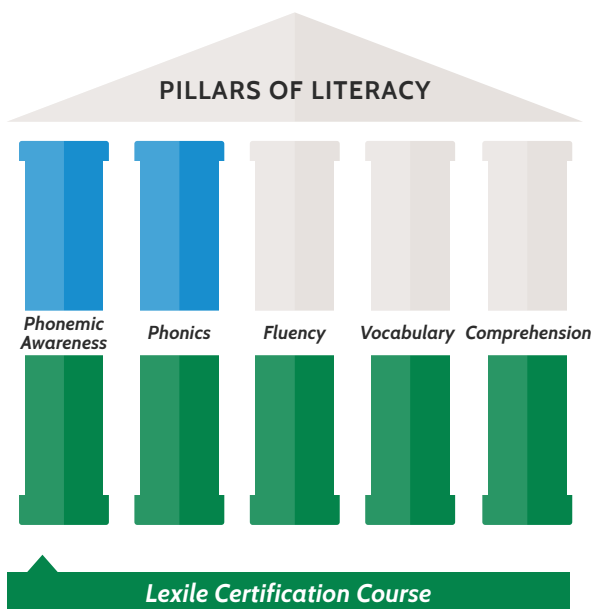

Whether it's on the internet, social media, radio or in the break room, I am reminded of the science of reading on a nearly daily basis. Being a teacher for nearly 25 years, I am excited to move forward with this new learning. We are currently looking into a new district wide reading program and many of the programs assess and instruct with Lexile levels in mind."

— VERMONT EDUCATOR

Beyond Phonics: Expand Your Science of Reading Expertise

Other Science of Reading Professional Learning

 The Lexile Certification Course offers more science of reading coverage.

How is the Educator Academy's training different than other science of reading professional learning?

- **Real-world application.** You'll uncover tangible ways to target your instruction based on the specific needs of your students.
- **Network building.** You'll join a unique community of certified educators who are committed to implementing data-driven instruction.
- **Lexile certification.** You'll become your school's go-to expert in using the Lexile Framework for Reading to accelerate reading growth.
- **Comprehensive approach.** Other science of reading programs primarily focus on phonemic awareness and phonics. While those are foundational to reading development, the science of reading also identifies additional components that are essential to reading proficiency. Our modules focus on research-based strategies and tools to support these areas.
